**The Modern Stopcock**  
Protecting property from  
the risk of water damage

# Surestop Stopcocks

Provide instant ability to turn  
off your mains water

Peace of mind for you and your home

Manufactured in the UK

# What are **surestop**® stopcocks?

**The easy and convenient way to turn off your mains water.**

Through a simple flick of a switch, a Surestop Stopcock will instantly turn off your water not only in an emergency, but every time you leave home.

There are no electrics or batteries involved and unlike a brass stopcock, it won't seize up and be effected by limescale.

They are fitted in an easy to reach location, or if that's not possible, with a convenient remote switch.

## Why protect **your home**?

**The costly damage and upheaval from escaping water.**

For a homeowner, tenant or landlord, a burst pipe is a major disaster. According to insurance provider, MORE TH>N, a burst pipe at mains pressure will leak up to 400 litres of water per hour (that's two baths full).

In many homes, a brass stopcock is their last line of defence from water damage. They are often inaccessible or fitted in a hard to reach location. What's more, brass stopcocks are susceptible to seizing up; making it longer and harder to stop the water supply.

With the average household cost for damage caused by a burst water pipe being £7,000\*, the repercussions from even a small leak can quickly mount up.

\*As reported by Direct Line

**With Surestop Stopcocks, fast and instant action can be taken at the first sign of a leak, or simply prevented by turning off your water when you leave the home.**

### **Benefits for you**

- Reduced risk of costly water damage
- Instant and easy control of mains water
- Limescale resistant; it won't seize up

**Proven performance throughout the UK.  
With over one million Surestop Stopcocks fitted.**

## Choosing the right **product for you**

We understand that every home's occupants have different needs, that's why our products have been designed to fit your requirements.

### **Surestop Stopcock**

Our standalone stopcock is the perfect choice for occupants who can reach a new or existing stopcock, but wish to have one which is much easier to use. It features a simple Lock-Down button to control the water supply, so that the entire system can be instantly turned off.

---

### **Surestop Stopcock with Remote Switch**

The Surestop Stopcock with a Remote Switch is ideal for when the stopcock cannot be easily accessed. After installing the Surestop Stopcock, a discreet remote switch, with tubing, is then fitted in a convenient location - for even greater ease of access.

---

### **Surestop Stopcock MDPE**

Ideal for New Build, this Surestop Stopcock is designed to be fitted directly between the external MDPE pipe and internal pipe system. The stopcock itself features a Lock-Down button to shut-off the water supply and is also available with a remote switch, for easier control.

## Technical details

- WRAS approved as stopcocks (No 1011009)
- 15mm and 22mm options for installation with plastic or copper pipe, as well as 25mm MDPE options
- Available with either push-fit or compression fittings
- Remote switch is supplied with 2m or 6m tubing
- Lockdown buttons from both stopcocks and remote switch options
- Cold water supply max 23°C at 10 bar
- 2 year warranty, UK manufactured

### Did you know?

1 in 8 homes experience water damage, ever year according to Halifax Home Insurance. Don't let your last line of defence from water damage be a hidden or seized up brass stopcock.

## Thinking of having a Surestop installed?

At Surestop we have been working with plumbers and installers for over 20 years. If you are thinking of having a Surestop installed and would like help finding someone to fit it, we have a network of plumbers and installers who we can recommend.
