DR145-1MOD-A DIN Rail kWh Power Meter

- MID B&D Approved
- Class B (kWh)
- 1000IMP/kWh Pulsed Output
- 1 Module Dinrail Mounted (35mm)
- Analogue Display

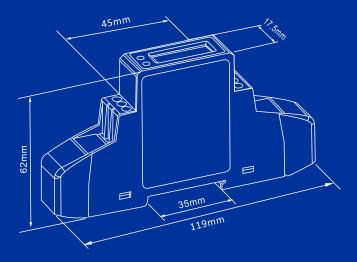

DR145-1MOD-A Single Phase kWh Meter

The SDM120 family of meters have been produced to offer a low-cost solution to metering low Amp circuits. The SDM120 range work directly connected to a maximum load 45A AC circuit.

All versions of the SDM120A meter come with a pulsed output for remote monitoring.

All SDM120A meters are housed in a 1U Dinrail mounted housing. They also come complete with sealable terminal covers to stop any tampering with the connections.

Dimensions

Safety Instructions

The following safety instructions apply to all versions of the SDM120A range of power meters:

Information for your own safety

This manual does not contain all of the safety measures for operation of the equipment (module, device) because special operating conditions, and local code requirements or regulations may necessitate further measures. However, it does contain information which must be read for your personal safety and to avoid material damages. This information is highlighted by a warning triangle and is represented as follows, depending on the degree of potential danger.

Qualified personnel

Operation of the equipment described in this manual may only be performed by qualified personnel. Qualified personnel means a person who has been authorised to commission, start up, ground and label devices, systems and circuits according to Safety and Regulatory standards

Use for the intended purpose The equipment must only be used for the application specified in the datasheet and the user manual.

Proper handling
The prerequisites for areliable operation of the product are proper transport, storage, installation and assembly, as well as proper operation and maintenance. When operating electrical equipment, certain parts of the equipment automatically carry dangerous voltages. Improper handling can therefore result in serious injuries or material damage. Use only insulating tools. Do not connect while circuit is live (hot). Place the meter only in dry surroundings. Do not mount the meter in an explosive area or expose the meter to dust, mildew and insects. Make sure the used wires are suitable for the maximum current of this meter. Make sure the AC wires are connected correctly before activating the current/voltage to the meter. Do not connect the meter to a 3 phase - 400VAC - network. Do not touch the meter connecting clamps directly with your bare hands, with metal, blank wire or other material as you may get an electrical shock.

Make sure the protection cover is placed after installation. Installation, maintenance and reparation should only be done by qualified personnel. Never break the seals and open the front cover as this might influence the functionality of the meter, and will avoid any warranty. Do not drop, or allow physical impact to the meter as there are high precision components inside that may

DR145-1MOD-A Analogue Kilowatt Hour Meter - Single Phase

Measured Parameters

The DR145-1MOD-A monitors and displays Imported Active Energy (kWh) of a single phase two wire (1p2w) system.
